

sent

Origin:

Takahashi

Why?

- PPTX sucks
 - LATEX sucks
 - PDF sucks
-

also:

terminal presentations

don't support images...

easy to use

depends on

Xlib

Xft

farbfeld

~1000 lines of code

usage:

\$ sent FILE1 [FILE2 ...]

- ▶ one slide per paragraph
 - ▶ lines starting with # are ignored
 - ▶ image slide: paragraph containing @FILENAME
 - ▶ empty slide: just use a \ as a paragraph
-

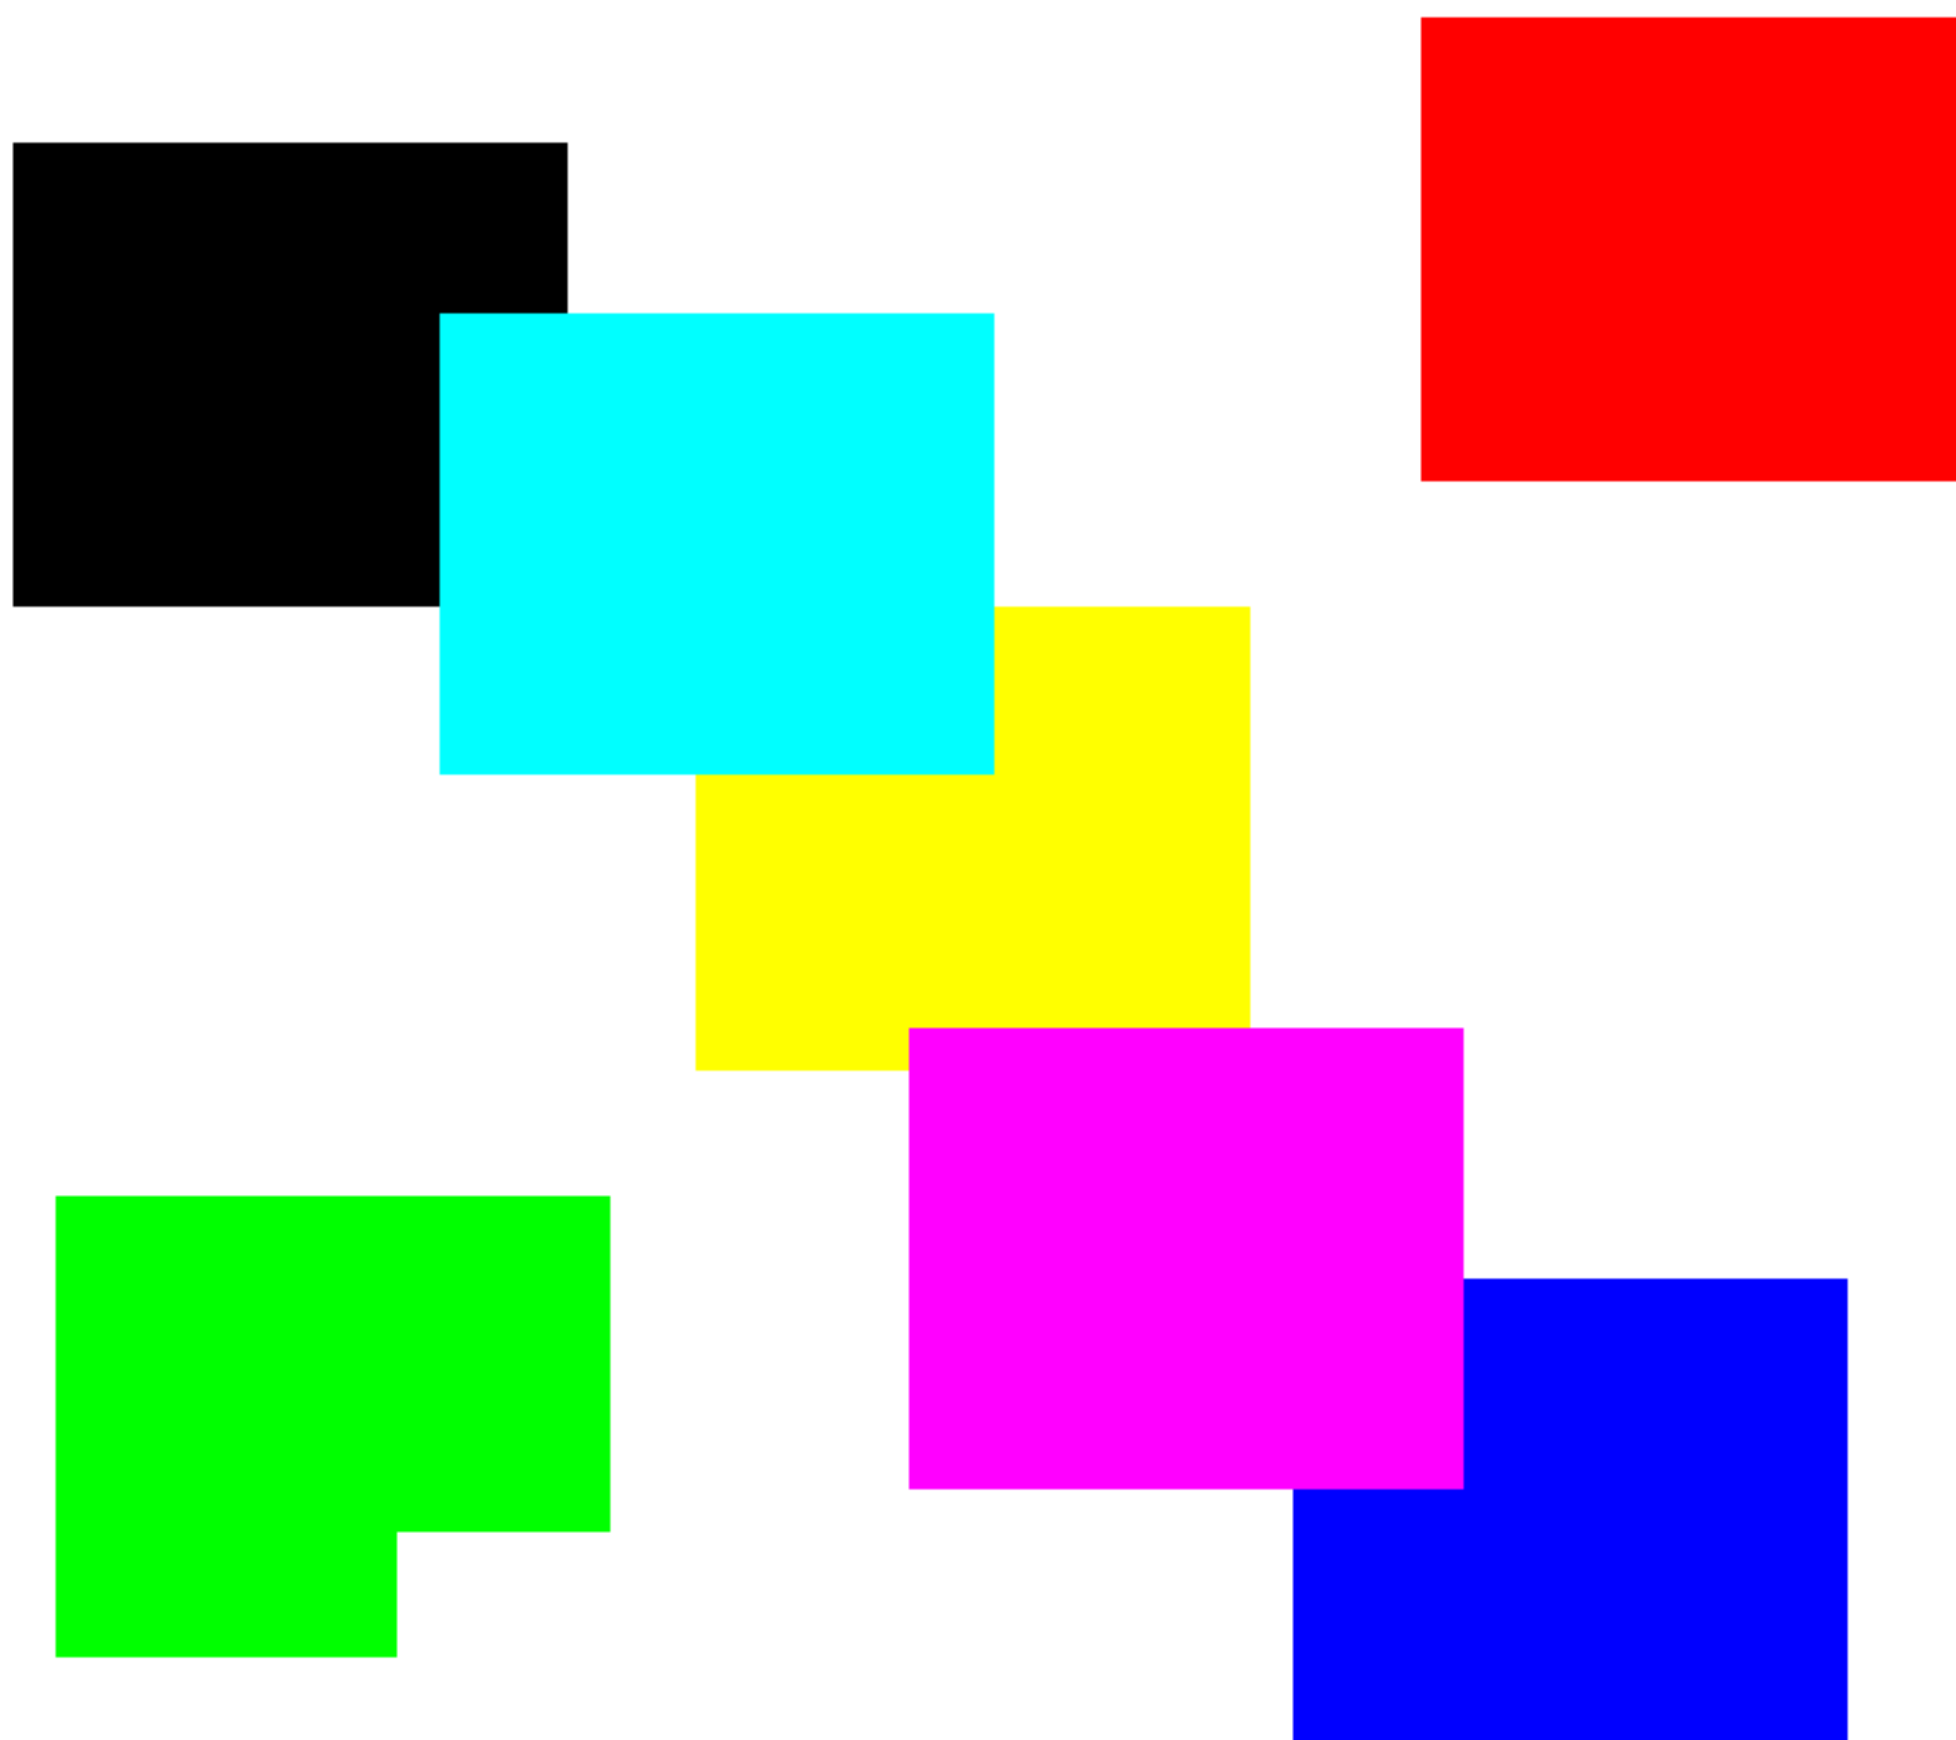

@this_line_actually_started_with_a_\.png

#This line as well

⇒ Prepend a backslash to kill behaviour of special characters

Images are handled in the
<http://tools.suckless.org/farbfeld/>
format internally.

sent also supports transparent images.
Try changing the background in config.h
and rebuild.

thanks.
